DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

" " This building is the headquarters and superintendent's residence at Washington Monument State Park. It is located at the entrance of the monument, picnic and camping areas. The structure is a one story, three bay stone building forming the residence section with a one bay extension which is the office and headquarters. It was built during the 1930's as part of the Civilian Conservation Corps program. The CCC also rebuilt the Washington Monument under the direction of architect Orin Bullock.

The house and office complex is constructed of native stone with recessed pointing. Casement windows are clustered into groups. Massive stone chimneys are located inside the west end wall and at the interior at the southeast part of the house. The roof is covered with asphalt shingles.

SPECIFIC DATES

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

This CCC office and residence is significant as an example of a noteworthy type of architecture and as representing an important period in the history of Washington Monument and the surrounding land.

Most of what is to be seen among the older structures at Washington Monument State Park dates from the CCC period. The monument was dismantled and reconstructed during this program and the stone walled area at the base of the monument was built by the CCC. The Washington Monument State Park was also developed at this time.

CCC buildings in Maryland are easily recognizable, being usually of round log or stone construction. There is a distinct CCC "style" that deserves recognition as a 20th century architectural form. Many buildings from the Civilian Conservation Corps period remain in use in state parks in western Maryland
